                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

1,5-lactone 6-phosphate + NAPPH.

PATHWAY: PIRST STEE IN PENTOSE PHOSPHATE PATHWAY.
SIMILARITY: BELONGS TO THE GLUCOSE-6-PHOSPHATE DEHYDROGENASE PAMILY.

"Sequence of the Bacillus subtilis genome between xiyA and ykor.";

Submitted (NOV-1977) to the EMBL/GENBARK/DDBAY REDUCTION OF L-GAMMA-
11 FUNCTION OF ACTAIXAES THE NADEH DEPENDENT REDUCTION OF L-GAMMA-
GLITAMYL 5-PHOSPHATE IMTO L-GLITAMATE 5-SENIALDEHYDD AND PAGGENERY. THE PRODUCT SPONTANEOUGH. UNDERGOES CYCLIZATION TO I L-FYRROLLNS-5-CARBOXYLATE.

1- PATRICLY ACTIVITY: L-Glitamate 5-semialdehyde + Phosphate + NADEH.

1- CATALYTIC ACTIVITY: L-Glitamate 5-semialdehyde + Phosphate + NADEH.

1- PATHANY: PROLINE BUSYNTHESIS LATHWAY: SECON STEP.

1- SUBCELUTIAR LOCATION: CYLOPIASMIC (BY SIMILARITY: BELONGS TO THE GAMMA-GLUTAMYL PHOSPHATE REDUCTASE PAMIL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hypothetical protein; Plasmid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC (R-X)n-peptide where n = 1-10; X = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, or a CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain functional group is cook CC or two double bonds, cyclobuty, cyclopentyl, cyclobexyl group, or a CC side chain of the peptide, where the side chain functional group is cook CC or two double bonds, cyclobutyl, cyclopentyl, cyclobexyl group, or a monosubstituted with a 1-5C straight or branched chain alkyl group, cyclopentyl prophenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ANA37001-B37058 represent examples co fit peptide portion of the conjugate. The peptides represent canalogues CC of a Bel-2 superfamily polypeptide corresponding to amino acids 72-97 of custoff the conjugate size of a subject, or for custoff of the cell death agonist Bad. The peptides is conjugate is subject all lymphoma/leukemia 2 (Bcl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 function. In particular, the peptide conjugate is seeful for treating a custoff of the cancer includes prostate, colorectal, gastric, con-small lung, renal or thyrold cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders, acquired increased apoptosis, e.g. neurodegenerative disorders, acquired conjugate is also useful for treating disorders characterized by cancer cells that conjugate is also useful for treating disorders characterized by concerded apoptosis, e.g. neurodegenerative disorders, acquired configures and conserved apoptosis, e.g. neurodegenerative disorders, acquired configures characterized by cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

The invention relates to a peptide conjugate having the formula:

(R X)N-peptide where n = 1-10; X = C-0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = 0 or NH.

CC when the R-X group is attached to the C-terminus of the peptide, or a side chain functional group is cook or CONH2; and R = 2.18C alkyl or alkoxy, 2.14C alkylenyl containing one or converge the bonds, cyclobutyl, cyclopentyl, cyclohaxyl optionally monosubstituted with a 1.5C straight or branched chain alkyl group, phenyl optionally monosubstituted with a 1.5C straight or branched chain of the peptide portion of the conjugate. The peptides represent examples cof the peptide portion of the conjugate The peptides represent examples cof the peptide portion of the conjugate The peptide conjugate is conjugate is seful for modulating apoptosis in the cells of a subject, or for the seful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (BCl-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 function. In particular, the peptide conjugate is useful for treating a conjugate afflicted with a cancer characterized by cancer cells that express Bcl-2. The cancer includes prostate, colorectal, gastric, conjugate is also useful for transforma, melanoma, or acute or chronic lymphocytic and non-lymphocytic anakama. The peptide conjugate is useful for second by cancer cells that express Bcl-2; giound the confugate and non-lymphocytic characterized by cancer cells that conjugate is also useful for transformative disorders, acquired conjugate is useful for transformative disorders, acquired conjugate is useful for second conjugate is useful for transformative disorders, acquired conjugate is also useful for transformative disorders, acquired conjugate is useful for transformative disorders, acquired conjugate is useful for transformative disorders, acquired conjugate is use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New peptide conjugates for modulating apoptosis or for inhibiting B cell lymphoma/leukemia 2 (Bel-7) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 18; Page 17; 74pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2000-679325/66

```
The invention relates to a peptide conjugate having the formula:

(R *Nyn *peptide where n * 1-10; X * C-0*, when the R *X group is attached to the N-terminus of the peptide or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X * O OH NH.

CC when the R *X group is attached to the C-terminus of the peptide, or a side chain functional group is COOH or OH; or X * O OH NH.

CC when the R *X group is attached to the C-terminus of the peptide, or a side chain functional group is COOH or OH NH2; and R * 2-18C alkyl or alkyl yor alkowy, 2-14C alkylaryl containing one or two double bonds, cyclobutyl, cyclopentyl, cyclobexyl optionally consulting one or two double bonds, cyclobutyl, cyclopentyl, cyclobexyl optionally composity the did to the standard of the peptide with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB7001-B3705B represent examples of the peptide portion of the conjugate of the peptide conjugate is of the peptide portion of the conjugate in the cells of a subject, or for cuseful for modulating apoptosis in the cells of a subject, or for cuseful for modulating apoptosis in the cells of a subject, or for cuseful for modulating apoptosis in the cells of a subject in the cells of a subject afflicted with a cancer characterized by cancer cells that capped to the subject afflicted with a cancer characterized by cancer cells that capped to a subject afflicted with a cancer characterized by cancer cells that cause or chronic lymphocytic and non-lymphocytic leakemia. The apoptide conjugate is also useful for treating disorders and peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate is also useful for peptide conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention relates to a peptide conjugate having the formula:

(R. X)n peptide where n = 1-10; X = C-0, when the X-3 group is attached to the N-terminus of the peptide, or a side chain of the peptide where continued the functional group of the side chain is xH2 or 0; Or NH, continued the functional group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain is xH2 or 0; Or NH, continued the x-3 group is attached to the C-terminus of the peptide, or a side chain side chain is xH2 or 0; Or NH, continued the x-3 group is attached to the C-terminus of the peptide, or a continued the x-3 group is attached to the C-terminus of the peptide, or a continued the x-3 group is attached to the C-terminus of the peptide, or a continued the x-3 group is a tracked chain a 1-5C straight or branched chain and y-3 group, or benzyl. The peptides what 7058 represent axamples continued pounds of the peptide portion of the conjugate or the peptide conjugate is greatly 1 group poptions in the conjugate and y-3 group or benzyl. The peptide corresponding to amino acids 72-97 of the peptide portion of the conjugate is a subject or for a subject. Or for a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject or a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New peptide conjugates for modulating apoptosis or for Johlbiting cell lymphoma/leukemia 2 (Bcl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 18;

bcl-x(L)/bcl-2 associated death promoter protein. (first entry

06-JAN-1997

Epitope; murine: bcl-x(1)/bcl-2 associated death promoter; Hadi stroke; polypeptide; bcl-x; cell death; regulate; HH1; apoptotic cell death; cytokine deprivation; IL-3 dependent cell line; immunodeficiency; AIDS;

```
This sequence represents the murine bol-x(L)/bol-2 associated death promoter (Bad) geno: Bad is a 2.1 kD protein which interacts with bol-2 and bol-x proteins and regulates cell death. It has homology to the bol-2 related family clustered in the BH and BH2 domain. Bad in spen found to hybridise to bol-x(L) and bol-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bol-x(L), but is much less effective at countering the death inhibitory activity of bol-x(L), and expression can accelerate apoptotic cell death induced by cytokine deprivation in an IL-3 dependent cell line expressing bol-x(L), and its also counters the death repressor activity of bol-x(L). Bad competes with Bax for binding to bol-2 or bol-x(L) to form beterodimers. Such agents may be used to identify agents which inhibit its binding to bol-2 or bol-x(L) to form beterodimers. Such agents may be used to treat resurodegenerative diseases, immunodeficiency diseases, ce.g. AIDS, senescence or ischaemia.
                                                                                                                                                                                                                                                                                                                                                              Query Match

CC The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell CC death regulator) proteins, having an amino acid other than Ser at CC position 112 and/or 115, relative to the murine BAD 204 as sequence. The present sequence is the murine BAD protein also described are: (1) CC fragments of mutant BAD protein able to decrease cell viability; (2) CC fision proteins of mutant BAD protein able to decrease cell viability; (2) CC fision proteins of mutant BAD with a heterologous polypeptide that CC or prevent diseases associated with reduced apoptosis, e.g. cancer, viral infection, lymphoproliferation, arthritis, infertility. (2) CC inflammation and autoimmune disease. Polypucleotide sequences encoding the following contraints BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD cc mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD cc and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDS, neurodegeneration, additional produces of serine phosphorylated and non-certain produced phosphorylated BAD. By usual immunoassays. Mutant BAD proteins have completed by a cativity than wild-type BAD which can become composition of the specified Ser, forming a product that does not heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family cc substituted cannot bind 14-3-3.
New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Murine; mouse; BCL-XL/BCL-2 associated cell death regulator; BAD protein; serine substituted mutant; apoptosis; cancer; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Fig 10; 95pp; English

                                                                                                                                                                                                                                                                                                                                  Ŷ
                                                                                                                                                                                                                                                                                                                                                          The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at CC position 112 and/or 136, relative to the mutane BAD 204 as sequence. The position 112 and/or 136, relative to the mutane BAD 204 as sequence. The present sequence represents a mutant BAD protein. Also described are: (1) CC fusion proteins of mutant BAD protein able to decrease cell vability; (2) fusion proteins of mutant BAD protein are used to treat cor prevent diseases associated with aduced approbasis, e.g. cancer. CC viral infection, lymphoproliferation, arthritis, infertility. (2) furiant thon and autoimmune disease. Polynucleotis sequences encoding mutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD companies of serims proposed as a such as AIDs, neurodegeneration, and introduced by measuring relative amounts of phosphorylated and non-composure that does not the specified Ser, forming a protein that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a product that does not the specified Ser, forming a p
                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-0CT-1996;
                                                                                                                                                                                                                                                                                                                                 204
```

```
The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell death regulator) proteins, having an amino acid other than Ser at C position 112 and/or 156, relative to the murine BAD 204 as sequence. The position 112 and/or 156, relative to the murine BAD 204 as sequence. The position il 12 and/or 156, relative to the murine BAD 204 as sequence. The createst sequence represents a mutant BAD protein. Also described are: (1) for the sequence represents a mutant BAD protein. Also described are: (2) fragments of mutant BAD with a heterologous polypeptide that correspond to the protein are used to treat or prevent diseases associated with reduced applicosis, e.g. cancervital infection, lymphoproliferation, arthritis, infertility.

Confident and autoimmune disease. Polynocleotic sequences encoding mutant BAD proteins can be used similarly by gone therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful in treatment of excessive apoptosis such as AIDs, neurodegeneration, aging or ischaenic cell death. The apoptotic status of cells is aging or ischaenic cell death. The apoptotic status of cells is given by measuring relative amounts of phosphorylated and non-composition of the specified Ser, forming a product that does not the producting activity than wild-type BAD which can become operations in the cytosol, thus promoching cell survival. The mutants with the cytosol, thus promoching cell survival. The mutants with the cytosol, thus promoching cell survival. The mutants with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New mutant BAD polypeptide with phosphorylatable serine replaced useful for, e.g. treating reduced apoptosis such as in cancer or

Serine-phosphorylated Boi.x-1/pol-2 Associated cell Death regulator polypepiide - useful for modulation of apoptosis associated with, e.g. cancer and immunodeficiency diseases

This sequence represents a novel serine-phosphorylated protein, BAD (BCL-XL/BCL2 associated cell doath regulator). The serine residue is phosporylated in a post-translational modification and allows binding to the 14-3-2 protein which is a signal transduction regulator. Modulators of phosphorylated BAD, which act through inhibition-activation of a phosphoserine phosphatase, are useful for preventing/treating increased/agercased apoptosis in a cell. The increased apoptosis may result from immunodeficiency diseases, sensecence, neurodegenerative disease, isohaemic cell death, reperfusion cell death, infertility and wound-healing. Decreased apoptosis may result from cancer, viral infeaction, hyphoproliterative conditions, arthritis, infertility. Infilammation and autoimmune diseases. Measuring the amount of phosphorylated compared to unphosphorylated BAD polypeptide and/or total BAD in a cell is useful for determining the apoptotic state of a cell.

                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents the amino acid sequence of Bad-DYTR approals modifying fusion protein comprising and seem sequence fused that short interior dishriberia toxin translocation domain (DYTR), The 1 sequence fused that the functional approals modifying fusion protein is capable of binding a callural approal sequence fused to the carget cell and integrating into or crossing a callural membrane of the carget cell in the papphosis modifying fusion protein comprises at least two domains: the DYR domain, which targets the fusion protein to the carget cell in the Bal-XL domain, which targets the fusion protein to the carget cell and the Bal-XL domain, which modifies an apoptocic response co in the target cell. The fusion protein is useful for modifying complifierative cell or an adjocyte, it is also useful for reducing the fusion protein and though inhibition or enhancement complications through inhibition or enhancement of apportocic cellural response. Including neurodepenerative disorders of apportocic cellural response. Including neurodepenerative disorders and attophy, stroke apsocles and surgulated feel growth as an uncollar and attophy, stroke apsocles and surgulated feel growth as the uncollar callural response.
                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                    The present sequence represents a protein of 166 amino acids. The sequence is disclosed as being a protein called BBC6 which regulates cell death through interaction with BC1-2. The DNA may be used for the production of the recombinant protein, which can be used in unspecified therapeutic or diagnostic procedures, as a molecular weight marker, and to raise antibodies that can be used in unspecified diagnostic or therapeutic applications and to reduce or eliminate the biological activity of the BBC6 protein in vivo.
                                                                                                                                                                                                                                                                                                                                              Claim 1; Column 11-12; 7pp; English.
